ArtiSential 5: What Can a Smaller, Lighter Laparoscopic Instrument do for Your Practice?

Since 2019, a growing number of US surgeons, hospitals and ASCs have recognized the value of LivsMed's ArtiSential wristed articulating instruments. With the introduction of ArtiSential 5--the only 5mm wristed articulating laparoscopic instruments--the question is: What exactly are the benefits of 5mm.

LivsMed 360 spoke with surgeons and several members of the LivsMed Sales Team. This group identified four specific benefits of 5mm.

Of course, the smaller incision for 5mm means less scarring which certainly can contribute to patient satisfaction.

The 5mm size means ArtiSential 5 can be used in any port, providing increased **flexibility** during the procedure.

The 40% size reduction compared to 8mm instruments means the instrument itself represents less obstruction **improving visibility** in the surgical field.

The lightness and balance of ArtiSential 5 increases the instrument line's **ease of use**.

Considering these benefits, it's conceivable that as a whole ArtiSential 5 could reduce operating time resulting in shorter procedures and less time under anesthesia for the patient. Of course less time under anesthesia has a variety of benefits all its own.

Surgeons Speak Out Leading Bariatric Surgeon Says ArtiSential Passes Litmus Test for Use at The Sosa Clinic

Dr. Jorge L. Sosa, M.D., a leading south Florida surgeon who has been in practice for more than 20 years and performed more than 8,000 bariatric

procedures, recently evaluated LivsMed's ArtiSential Laparoscopic instrument line. "As a clinical surgeon not particularly interested in research or academia, I evaluate equipment and instruments on their potential to improve surgical efficiency here at The Sosa Clinic, Sosa said. "After using the ArtiSential instruments in both gastric bypass and sleeve gastrectomy procedures they definitely pass my litmus test. They provide surgical versatility and allow for efficient surgical maneuvers." He added that he was looking forward to seeing this advanced maneuverability on future products from LivsMed.

New 5mm Hook and Spatula Further Expand LivsMed's ArtiSential 5 Instrument Line

LivsMed, has followed up the introduction of it's ArtiSential 5 - the 5mm line of it wristed articulating instruments (see related story above) with the first new additions of a 5mm Hook and 5mm Spatula. These widely used instruments meet some of the most common needs of laparoscopic surgeons such as reliable monopolar coagulation and dissection.

As with all ArtiSential instruments the new hook and spatula provide a full range of motion and true 90° articulation allowing surgeons to approach the anatomical target from any angle and accomplish even complex maneuvers more easily.

Your LivsMed Team

Why Do Love Representing LivsMed?

As a sales professional, there are very few opportunities to represent revolutionary technology. My experience told me there is nothing like LivsMed on the market – it is second to none. I could not pass up the opportunity to be part of this team and to launch ArtiSential in the US.

Jeff Cellini
Regional Manager

I'm still blown away by the technology. I love it when the surgeon uses ArtiSential and has that "aha moment" when they say, *'Oh my gosh, this is why we need articulation; this is why we have to have LivsMed.'* For me, I'm excited to change straight stick to articulation.

Hank Nguyen
Regional Manager

While robotic assisted surgery requires a significant capital investment, a dedicated OR, and specially trained staff, ArtiSential is a single use instrument that's free to use, on-demand - but still provides the articulation of the robot.

Gerry Giuliano
Area Sales Manager

Upcoming Shows... We'll See You There!

AAGL

November 16-19

New Orleans, LA

LivsMed

Booth 221

Exhibit Hours

Sunday, Nov 17 | Welcome Reception 5:30 pm – 7:30 pm

Monday, Nov 18 | 8:15 am – 2:00 pm

Tuesday, Nov 19 | 8:15 am – 2:00 pm
